Accumulation chains

Accumulation chains ensure a hassle-free conveying of goods.

Accumulation chains

IRIS Accumulation chains ensure a **hassle-free conveying of goods** in lines that start and stop intermittently while the chains maintain a regular speed, thanks to their central, external or top rollers.

These rollers, available also in stainless steel and synthetic materials, help the chains **efficiently carry significantly heavier weights** while maintaining the optimal load distribution.

A variety of accumulation chains can be supplied for a wide range of conveying applications, from warehouse transport to systems that feature material handling robots.

SERVICES

Many references available and in stock.

Corrosion-resistant versions available.

Specific products on request.

Matched pairs on request for chains working in parallel.

Chains of any length.

Technical assistance.

Special initial lubrication available for longer service life

ACCUMULATION CHAINS	TYPES	APPLICATION
Central roller chains 	A, A1, A double B C, C triple D E	Stable conveyance for the transportation of goods
Outboard roller chains 	F, F1, F2 G, G1	Especially suitable for downsizing conveyors
Top roller chains 	H J, J double, J1	Perfect for the slow conveying of heavy items
Double speed chains 	DS	2.5x Faster conveying 60% Energy Saving

IRIS can provide **additional references upon request**, as well as solutions specially developed for the client.

Central roller chains

Chains with central rollers, which are available in both stainless steel and plastic, provide a stable conveyance for the transportation of goods. The central roller, aided by its side rollers, marks the most balanced line of convergence for the conveyor.

Roller chains on the sides transmit drive power and keep the chain running on the guide profile, respectively, guaranteeing a precise positioning and an even distribution of the load.

Outboard roller chains

With outboard roller chains, it is possible to adhere numerous additional rollers, making them flexible for downsizing conveyors, and thus, a perfect solution for applications where small sized good are transported directly on the chain.

Outboard rollers allow the conveyor to bend backwards, and this makes the return side setup easier.

Top roller chains

Chains with freely rotating top rollers are assisted by plates on the sides, which make for an even conveyance of goods. They are perfect for transporting heavy goods at a slow speed, in applications such as the automotive industry. Top roller chains are characterised by a narrower width than other accumulation chains.

Double speed chains

Double speed chains allow goods to be conveyed 2.5 times faster than the chain itself, thanks to its combination of different-sized central rollers.

As a result, the same level of productivity can be achieved with significant energy saving, as the chain can run up to 60% slower. The lower speed favours a quiet run of the conveyor.

Service life is also maximized.
